

# In this RAINY SEASON...

Redouble Civil Protection  
capabilities

In the rainy season, authorities at the three levels of government must pay attention to the presence and evolution of phenomena that may put the population at risk and, in consequence, opportunistically implement the protocols to safeguard Mexican lives

Remember,  
heavy rains may  
cause flooding and  
slope instability, very  
common phenomena  
in our country, with  
high economic and  
social losses.

## REINFORCE PREVENTION - Before

Upgrade the  
risk atlas, identify  
flooding areas

Identify  
settlements  
near dams, rivers,  
canyons and slopes

Dredge dams, rivers  
and drainage n  
etworks. Inspect  
the roads

Upgrade procedures,  
carry out drills and  
evaluate your capabilities  
and resources

## ACTIVATE YOUR PLAN - During

Opportunistically broadcast  
the National Weather  
Service forecasts  
and alerts

Reinforce the  
communication  
with authorities from  
other government levels

Constantly monitor  
dams, rivers and  
streams levels

If overflows of dams  
or rivers are imminent,  
perform preventive  
evacuations

## RECOVERY BEGINS - After

Assess damages,  
identify secondary  
risks and prioritize needs

Reinforce  
the hygiene and  
health checks

Coordinate the  
cleaning and care  
actions of affected areas

Implement the recovery  
plan in coordination with  
the authorities of other  
government levels
