The earth as a whole: "La tierra en su conjunto" es un artículo que propone nuevas teorías como la de la "Gaia" que según esto "sostiene que la vida y la no vida en la Tierra, forman un sistema combinado, y se han desarrollado en estrecha conexión sobre la historia de la Tierra." Así mismo observan que "la vida en la Tierra, ha dado forma a la misma Tierra, así como ésta última, ha dado forma a la vida"; por otra parte mencionan que una forma de entender cómo los organismos vivos pueden influir en la habitabilidad del planeta, es el concepto de "Mundo Margarita" que es la comprensión básica de cómo la vida puede influir en la habitabilidad del planeta, a través de la estabilidad climática a largo plazo... al parecer son ideas complejas pero es otra forma de ver a la tierra...

Deep - Sea Benthic Foraminifera: Este artículo de Foraminíferos Bentónicos habla de la importancia de éstos como un componente importante de la biomasa en alta mar de los océanos actuales. Además de su interés como especie indicadora, que viven en el hábitat más grande en la tierra, las pruebas se han utilizado ampliamente en isotópica y análisis de elementos traza, destinada a la reconstrucción de los ambientes del pasado. El estudio de ellos ayuda a la introducción de los conceptos básicos de lo que es la taxonomía de foraminíferos bentónicos, ecología y paleoecología y el uso como un proxy para interpretar el estado de los océanos y los climas pasados, la productividad oceánica y específicamente oxigenación de las aguas profundas.
