# PREFACE

The document herein was produced by the International Medical Device Regulators Forum (IMDRF), a voluntary group of global medical device regulators from around the world. The document has been subject to consultation throughout its development.

There are no restrictions on the reproduction, distribution or use of this document; however, incorporation of this document, in part or in whole, into any other document, or its translation into languages other than English, does not convey or represent an endorsement of any kind by the International Medical Device Regulators Forum. It is also worth noting that it is the intent of IMDRF is to continue to monitor use of this structure and work to continually improve the documents.

# INTRODUCTION

The Regulated Product Submission (RPS) proposal was endorsed as a New Work Item (NWI) by IMDRF at its inaugural meeting in Singapore (March 2012). The proposal, as endorsed, included the objective of establishing a comprehensive harmonized structure for premarket medical device submissions.

This document provides an internationally harmonized, modular, format for use when filing medical device submissions to regulatory authorities for market authorization. This document is comprehensive in scope in that it defines the location of both common (IMDRF) and regional content for all submission types. As a consequence, not all headings are required for all submission types and/or IMDRF jurisdictions.

This ToC document has been developed with consideration of public comments and experience gained from the pilot testing of the draft ToC version.

The ToC documents are intended to work together with a separate document created for each participating jurisdiction – a classification matrix. The classification matrix defines whether for the given submissions type a heading is required, not required, optional, conditionally required, etc. The classification matrices are the published under the authority of participating authorities and are not products of IMDRF, please consult regional regulator websites for further information.

The release of the first version of the final ToC document makes available harmonized formats for use in filing IVD medical device submissions for market authorization.

IMDRF will monitor the use of these structures and work to continually improve the documents at appropriate intervals based on sufficient use and experience. Comments or questions associated with these documents will be accepted in the prescribed format (Feedback form – excel spreadsheet) and can be submitted to imdrf.toc@gmail.com with the following subject line: IMDRF IVD ToC MA Feedback.

# SCOPE

This document was developed for in-vitro diagnostics medical device (IVD) market authorization submissions. Market authorization submissions for combination products are out of scope; refer to each specific regulator for guidance regarding combination products. Submissions to request approval to conduct clinical trials are not within the scope of this document.

The document is intended to provide guidance for industry with flexibility to adapt to the variety of products and future products.

# PURPOSE

To create a comprehensive submission structure that can be used as a harmonized international electronic submission format while minimizing regional divergences and indicating where regional variation exists. This document is intended to provide guidance regarding the location of submission elements. This document is intended to work together with a separate document created for each participating jurisdiction – a classification matrix.

This document is not intended to introduce any new regulatory requirements; however, by virtue of being more transparent, it may appear to be introducing new requirements.

# **CLASSIFICATION MATRICES**

As this document is comprehensive in nature, not all headings are required for all submission types and/or jurisdictions. This document is intended to work together with a separate document created for each participating jurisdiction – a classification matrix. The classification matrix defines whether for the given submissions type a heading is required, not required, optional, conditionally required, etc. The classification matrices are to be made available on regional regulators websites.

#### DEFINITIONS

**<u>FULL REPORT</u>** - Typically includes a complete, detailed description of the objective of the assessment, the methods and procedures, study endpoint(s), pre-defined pass/fail criteria, deviations, results summary, discussion and conclusions, and may include data. Complete, detailed support of method selection, worst case justification, study endpoint selection, and pass/fail criteria should be included.

<u>SUMMARY</u> - Typically includes a brief synopsis of the assessment (1) purpose, (2) methods and (3) results and (4) discussion and conclusions. Outliers and deviations should be reported with the results. The purpose of the assessment and description of methods should address:

- 1. Why the characteristic being evaluated is of interest; and
- 2. why the particular methods are being used to evaluate the characteristic, if applicable including why a regional or harmonized/recognized standard has or has not been complied with.

27 March 2018

Page 3 of 52

### HEADING CLASS - Headings are classified as either IMDRF; IMDRF, RF; or Regional.

Heading classification is provided in this document to provide an indication of the relevance of any given heading to a particular jurisdiction. The classification matrices provide further requirement classification by jurisdiction and submission type and should be used as the final reference for information of this type.

**IMDRF headings** are used by most regulators and are therefore considered an IMDRF heading. Content of IMDRF heading contain common elements and may contain regional elements in addition to the common elements.

- **Regional Focus (IMDRF, RF)** content needs to be considered with the specific region in mind and will likely need to be adapted for that region (e.g. regional approval numbers or regulatory history, regional variation in approved or requested intended use/indications for use)
- In cases where not all regulators use the heading, the applicable jurisdictions are listed following the heading classification (e.g. IMDRF (USFDA, HC, JP)).

**Regional headings** are those that contain no common elements. In this case the heading name is consistent amongst IMDRF members, but the content will be specific and different for each region. Headings are also classified as Regional if they are required by only one jurisdiction.

<u>SUBMISSION</u> – A regulatory submission can be any type of information related to a medical device regulatory process. This includes but is not limited to a request for approval/authorization to market a device, any communications relating to the original submission, and any request for modification to an existing approval. The submission types that will be accepted in the format described in this document will be dictated by regional policy.

### NUMBERING OF HEADINGS

Numbering should remain consistent regardless of whether the heading is required or not. For example, if Heading CH1.02 is not required for the submission type or jurisdiction, but Headings CH1.01 and CH1.03 are, then the numbering would remain CH1.01 followed by CH1.03.

Letters should be added to the numbering of custom headings to indicate the sequence of presentation. For example, under stability of specimens, CH3.5.01.1 is a custom heading; it should be presented as shown below.

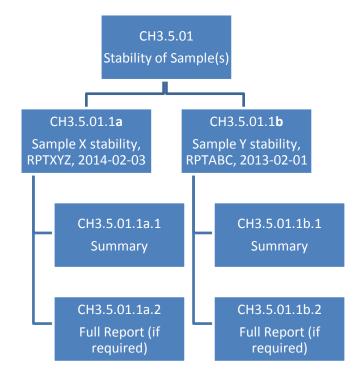

Figure 1 - Numbering of Custom Headings

# QUALITY MANAGEMENT SYSTEM CHAPTERS (6A & 6B)

Chapter 6A & B of the ToC is written in terms of the quality management system language employed in ISO 13485. Chapter 6A is where the company places the standard operating procedures (SOPs) the company utilizes to implement its overall high level quality management system. Chapter 6B is where the company places the documents and records the company utilizes to implement the quality management system SOPs described in Chapter 6A.

# LANGUAGE REQUIREMENTS

Each jurisdiction has its own language requirements. Regional guidance should be sought to ensure that content is provided in a language that is acceptable for the jurisdiction to which the submission will be submitted. Any translated material submitted should be verified for accuracy.

### PAGINATION

Pages of the submission should be numbered in such a manner that information can be referenced by page number. This may be done either by consecutively numbering the entire submission, or numbering the pages within a section or chapter (e.g., CH2.4.1-1, CH2.4.1-2).

27 March 2018

Page 4 of 52

# **OTHER GENERAL NOTES**

This outline of documentation is to support a smooth documentation process. It remains the applicant's responsibility to ensure all regulatory requirements are met, and that clear and transparent evidence of conformity to these requirements are provided.

Regional regulatory guidance will vary between the IMDRF member regulators and can be found in a variety of locations including the individual regulator's laws, directives, regulations, guidance documents, etc. When any requirements are conflicting between this document and regional documents (e.g. the regional laws, directives, regulations, guidance documents), the regional requirement will take precedence.

For the USFDA and ANVISA, regional regulatory guidance include the categories (1) special controls in a device specific regulation, (2) device-specific guidance document, (3) special controls guidance, (4) special controls guideline, <u>and/or</u> (5) statutory or regulatory criteria.

When submitting to the USFDA please refer to the current version of the following MDUFA IV guidance documents to ensure the content for each heading and the overall electronic format of the submission is sufficient to be accepted for review by the USFDA. For example:

- 1. Refuse to Accept Policy for 510(k)s: Guidance for Industry and Food and Drug Administration Staff
- 2. Acceptance and Filing Reviews for Premarket Approval Applications (PMAs): Guidance for Industry and Food and Drug Administration Staff
- 3. eCopy Program for Medical Device Submissions: Guidance for Industry and Food and Drug Administration Staff

For the EU, the latest EN ISO version and related Annex Z should be taken as reference to verify the correct presumption of conformity with the essential requirement of Medical Devices Directives.

Note: WHO participates as an Official Observer in the IMDRF and its working groups. Recommendations from WHO are based on the experience of WHO Prequalification assessment, taking the needs of Member States without strong regulatory systems into account.
