Operation and Monitoring

The Agro-Alimentary Health and Safety Program constitutes the main financing source for the operation of Zoosanitary Campaigns.

These actions are carried out through Animal Health Auxiliary Bodies (OASA) authorized by the SADER.

The OASAs are constituted in accordance with the provisions of the Federal Animal Health Law, its regulations, and the Senasica's 01-050 procedure. They operate federal and state resources based on the provisions of the Sustainable Rural Development Coordination Agreement, executed between the SADER and federal entities, as well as the Specific Execution Technical Annex for the Operation of the corresponding Agro-Alimentary Health and Safety Program.

The Senasica reviews and validates the Zoosanitary Campaigns programs, it also coordinates the supervision, follow-up, and evaluation for their correct operation and the exercise of the resources operated by the 31 OASAs in the country.

Actions of the Agro-Alimentary Health and Safety Program.
