

Biosafety for GMOs

Genetically Modified Organisms

Author

National Service for Agro-Alimentary Public Health, Safety and Quality

Date of publication

February 26, 2020

Senasica participates in the establishment of policies for the national and international regulation of biosafety of Genetically Modified Organisms (GMOs), in plant, animal, aquaculture and microorganism species; applicable by the Sader, to promote the operation and recognition of the prevention, reduction and control of possible risks that activities with GMOs could cause to animal, plant and aquaculture health, in support of actions related to the operation of biosafety.

Senasica has the [National Reference Center for the Detection of Genetically Modified Organisms \(CNRDOGM\)](#), which assists in the analysis for the detection, identification, quantification and sequencing of samples collected by official personnel in the inspection activities of the permits that have been granted, as well as in activities related to the monitoring of the presence of

GMOs that are not allowed in the environment.
