

Split production program (Split System)

It is a project of the Mexican Government through Senasica in conjunction with the Mexican beef industry.

The split fattening program (Split System), was designed since 2016 and includes the monitoring of all points of intensive cattle production, in order to comply with international regulations for the export of fresh beef originating from animals born, raised, slaughtered and processed in the Mexican Republic, with sufficient quality and safety to export to any of the 28 countries that make up the European Union.
