

Authorized inputs

For organic production certified under the Organic Products Law.

In Mexico, the applicable legislation for organic products establishes the National Lists of Authorized Substances for agricultural and livestock organic operations, which is part of the National Control System for Organic Products (SNC, in Spanish) that is managed by the SENASICA.

The SNC is tasked with the issuance of the criteria applicable to define the inputs authorized for organic certified production under the Organic Products Law (LPO, in Spanish).

To comply with the foregoing and with the provisions of the Organic Products Law and its Regulations, the criteria and requirements applicable to authorize inputs is established in Title VI, ANNEX 1 and ANNEX 2 of the *Agreement to inform the Guidelines for the Organic Operation of agriculture and livestock activities*, published in the Federal Official Gazette on June 8, 2020.
