

Public Consultation of Operating Manuals

National System of Phytosanitary Epidemiological Surveillance

Pursuant to article 46 of the Federal Plant Health Act (LFSV) that establishes that *“Whenever a pest that causes a phytosanitary emergency to one or more vegetable species in all the national territory, or a part thereof, is detected, the Secretariat shall implement the Plant Health National Emergency Device, which consists in the urgent and coordinated application of the necessary phytosanitary actions”*, operational manual are submitted to the consideration of technicians, academics, researchers, agricultural associations, product systems, and the public in general so as to receive comments and feedback that reinforce the technical aspects of the document. Thus, all manuals are available in the official web page of this Secretariat for as long as it is deemed necessary.

Note: Pests mentioned in these manuals are not present in Mexico, and therefore are only for making queries and comments; yet they may be valid as soon as the presence of the pest is officially detected and confirmed. Individuals responsible for executing the phytosanitary actions established in these manuals will rely on the decisions made by SENASICA.

Comments from interested parties should be sent to this office at the following e-mail address: clemente.garcia@senasica.gob.mx
