The winner of the Animal Health National Award is announced!

The work of Ms. Ofelia Flores Hernández, PhD, helped to open the door of international markets to our national producers.

The award winner headed efforts to adapt and validate techniques within the context of the National Program to Monitor and Control Toxic Residues and Pollutants.

As reported by the SENASICA, the 2022 Animal Health National Award jury selected Ms. Ofelia Flores Hernández, veterinarian-zootechnician as the winner of the award, due to her work in the registry and measurement of toxic residues in foodstuffs.

The award winner is a graduate of the School of Veterinary and Zootechnics Sciences of the Mexican National Autonomous University (FMVZ-UNAM) and holds a master's degree in Veterinary Sciences from the same college.

Her work over nearly 30 years in the SENASICA, while heading efforts to adapt and validate techniques within the context of the National Program to Monitor and Control Toxic Residues and Pollutant, has been decisive for Mexican foreign trade.

Implementing these techniques has opened the doors of international markets to our national producers, which has made possible for Mexico to stand out as an exporter of meat products.
