

Electronic Phytosanitary Certificate (ePhyto)

It is the electronic version of a phytosanitary certificate in XML format.

Improving Safe Trade in Plant and Plant Products

Importers or Exporters of agricultural goods must use the Mexican Foreign Trade Digital Window to create and receive ePhytos.

To benefit from the use of ePhyto, users must make their import or export request through the Website www.ventanillaunica.gob.mx using their electronic signature.

IMPORTS

When entering the data of the goods, the user must only declare the folio number of the International Phytosanitary Certificate in the import request made at the One-Stop Service and attach the PDF to validate some data. Therefore, it will no longer be necessary to present the original CFI at the physical inspection.

The electronic CFI will be reviewed by the Senasica officer upon Application's Documentation Review.

For exports that require an International Phytosanitary Certificate: e-Phyto must be requested through the One-Stop Service using the procedure found in the menu SADER-> Certificates and Requirements Request->Export Certificates-> SENASICA-05-001-A International Phytosanitary Certificate for the Plant Export, their products and by-products.

The electronic CFI is automatically sent to the country of destination at the moment of being authorized by a Senasica's Officer.

EXPORTS

Consult your ePhyto according to the procedure outlined in [Fact Sheet No. 23](#).
