

Checkmate to gender roles

At SENASICA we want to know more about gender roles

Do you know what the benefits of learning through games are? A game is an activity that helps reinforcing skills such as planning, organization, attention, memory, creativity and teamwork, as well as emotional management.

Game activities facilitate learning and is understood as a method for harmonizing the work environment, coping with stress, and improving social skills among co-workers.

Through the Ethics Committee, the SENASICA organized games and activities to promote harmony among collaborators, which allows opening dialog spaces through which we learn and exchange opinions on gender roles.

It is worth recalling that the concept of gender role is understood as the set of conducts, social regulations and behaviors that reinforce cultural stereotypes associated to a gender of masculinity or femininity, creating a gap in the development of both genders.

And do you know the name of any female football player?
