

Animal Health Protection Subcommittee

The National Consultative Committee for Agrifood Standardization (CCNNA) was established at the end of 2012 through an agreement published in the Official Gazette of the Federation (DOF).

Its objective is to reduce the time required for the preparation, discussion, and issuance of Mexican Official Standards on agrifood matters, in order to strengthen the sector's regulatory framework.

To better perform its functions, the Committee is supported by specialized subcommittees, one of which is the Animal Health Protection Subcommittee, whose responsibilities include proposing, analyzing, and developing draft Mexican official standards for the prevention, control and eradication of animal diseases and pests.

In addition, to present proposed insurance projects for the use and application of veterinary products; prevention of contamination of food for animal consumption; prescription of drugs for use in animals; specifications to be met by products, processes, facilities, services, activities, or systems, when these constitute a risk to animal health and have an impact on livestock production; epidemiological surveillance; and humane treatment and protection of animals.

These preliminary drafts must be submitted to the *National Advisory Committee for Agrifood Standardization* for discussion, voting and, if necessary, approval.
