

Improving awareness and understanding of RAM through effective communication, education, and training

This objective involves the following strategies: establishing an educational communication program based on scientific evidence; promoting the inclusion of antimicrobial resistance and its rational use in the curricula, didactic materials and school activities as well as in the study programs in the different health professions (human and animal); such activities will receive continuous training courses. Other field to coordinate dissemination actions is the pharmaceutical and agro-alimentary industry.

In order to strengthen the actions of this objective, a questionnaire was developed to know the level of knowledge regarding antimicrobial resistance in the veterinary environment and related professions, at a student and professional level.
