

Alliance between COFEPRIS, SENASICA and the FDA for the safety of Fresh and Minimally Processed Agricultural Products

A Dynamic Alliance in action

We are pleased to present the report “Alliance between COFEPRIS, SENASICA and the FDA for the safety of Fresh and Minimally Processed Agricultural Products of the United States of America (USA). A Dynamic Alliance in action.”

The Alliance for the Safety of Fresh and Minimally Processed Agricultural Products (PSP) is an innovative collaboration to address the changing nature of food production and distribution practices facing our countries.

This report highlights how Mexico and the US work together to ensure the safety of fresh and minimally processed agricultural products.

The U.S. Food and Drug Administration (FDA), the National Service for Agroalimentary Health, Safety and Quality (SENASICA) and the Federal Commission for the Protection against Health

Risks (COFEPRIS), have worked together, with institutional approaches to reinforce prevention practices and the rapid response to possible outbreaks related to food consumption.

As explained in this report, we have worked together to contain potentially serious outbreaks related to these products, and reduce consumer exposure to foodborne illnesses.
