

Pets undergoing medical treatment

National Service of Health, Safety and Agrifood Quality | April 05, 2023

If your pet has skin wounds or infections (such as mange, dermatomycosis, dermatophilosis, alopecia or similar), is ill, has a medical condition or cannot be vaccinated against rabies, it is important that when entering Mexico you present your medical prescription, on letterhead and with the number of your Professional Certificate or equivalent*, explaining the condition and its treatment, so that the medicines can be entered.

*The photocopy attached to the certificate is accepted.
