

## **Information, data sheets and reference materials**

National Service of Agrifood Health, Safety and Quality - August 19, 2022

The diagnostic laboratories also fulfill the function of making available to researchers, technicians and interested persons, bibliographic and photographic reference collection material related to national and international plant health. The transfer and dissemination of these technical-scientific documents are aimed at approved laboratories, official personnel and research and teaching institutions that require them.

There are protocols, technical sheets and monographs prepared by institutional personnel and in collaboration with national and foreign educational and research institutions to support the inspection activities of OISA and the Phytosanitary Epidemiological Surveillance Program, as well as for technical personnel who contribute to safeguarding plant health in Mexico, thus making it possible to maintain a healthier, more productive and profitable national agriculture.
