

Training course for Detection of Pathogenic Organisms in plant products by real time PCR and biochemical tests

In plant products by real time PCR and biochemical tests

National Service of Agrifood Health, Safety and Quality | April 26, 2023

The Department of Biological Contaminants Analysis of the National Reference Center for Food Safety and Biosecurity offers the general public training for the detection of pathogenic organisms (*E. coli* O157:H7, *Salmonella* spp, *Listeria monocytogenes*) in plant products by real time PCR and biochemical tests.

To access this course, send your request by e-mail to QA Víctor Manuel López Herrera, victor.lopez@senasica.gob.mx, Head of the Biological Contaminants Analysis Department, to agree on the training date.

For further information, please call 52(55) 59051000 ext. 53047.

The course consists of 40 hours divided into 5 days, in which the following topics will be covered:

- Sample processing
- PCR in its three stages: collection, reagent mixing, analysis.
- Confirmation by biochemical tests: isolation and characterization.
- Strain: handling and preservation of bacterial strains

To download the payment form and to know the current cost of the training, click here:

- Visit e5cinco
- Section: Payment of products
- Choose:
- Area: Safety
- Sub-area: National Reference Center for Pesticides and Contaminants

- Product: Training course for the detection of pathogenic organisms (E. coli O157:H7, Salmonella spp, Listeria monocytogenes) in plant products by real time PCR and biochemical tests
- The original proof of payment must be submitted before the start of the training.
