| Warning | **Microsof Office Cybersecurity Newsletter.** |
|---|---|
| **TLP** | AMBER+STRICT |
| **Description.** | A. As reported by TechRadar, this new exploit would be making use of this vulnerability in the Microsoft Office application and what the attackers do is to get in with the specially crafted Word document to be the element that gives them access to Windows commands.<br><br>B. The cybercriminals are able to execute whatever lines of code they want without anyone stopping them.<br><br>C. Anyone who receives this Word document and opens it will give hackers permission to access their computer.<br><br>D. Microsoft, offered a method that consists of entering some commands in the command console acting as an administrator to partially solve the problem.<br><br>E. This is a vulnerability that hackers are able to take over a computer in just seconds.<br><br>F. The vulnerability they use is known as Follina and is used to access the Microsoft Diagnostic Tool that reports system status.<br><br>G. Anyone who receives this Word document and opens it gives the hackers permission to access their computer. |
| **Recommendations** | ▪ Keep your device's operating system up to date.<br>▪ Have an antivirus tool.<br>▪ Do not open Word documents that you are not sure of their origin. |
